

## Chapter 7 - CSS Grid & Media Queries

A CSS grid can be initialized using :

```
• Container {  
    display: grid;  
}
```

All direct children automatically becomes grid items

The grid-column-gap property

Used to adjust the space between the columns of a CSS grid

The grid-row-gap property

Used to adjust the space between the rows of a CSS grid.

The grid-gap property

Shorthand property for grid-row-gap & grid-column-gap

```
• Container {  
    display: grid;  
    grid-gap: 40px 100px;  
}
```

Note : For a single value of grid-gap, both row and column gaps can be set in one value.

Following are the properties for grid container:

- 1, The grid-template-columns property can be used to specify the width of columns

Container {

display: grid;

grid-template-columns: 80px 120px auto;  
}

- 2> The grid-template-rows property can be used to specify the height of each row

Container {

display: grid;

grid-template-rows: 70px 150px;

- 3> The justify-content property is used to align the whole grid inside the container.

- 4> The align-content property is used to vertically align the whole grid inside the container.

Following are the properties for grid item:

- 1 The grid-column property defines how many columns an item will span.

grid-item {

grid-column: 1/5;  
}

- 2 The grid-row property defines how many rows an item will span.
- 3 We can make an item to start on column 1 and span 3 columns like this :

```
.item {  
    grid-column: 1 / span 3;  
}
```

### CSS Media Queries

Used to apply CSS only when a certain condition is true.  
Syntax :

```
@media only screen and (max-width: 800px) {  
    body {  
        background: red;  
    }  
}
```
