

Chapter 3 - Creating a page layout

When we use the right tag in right place, it results in a better page layout, better indexing by search engines and better user experience.

We use the following tag to get the job done

```
<header>
<main>
<footer>
```

} Website layout

Contains nav tag

Inside the main tag we insert the following tags:

- <main> → The main opening tag
- <section> → A page section
- <article> → a self contained content
- <aside> → Content aside from the content (eg: Ads etc)
- </main> → The main closing tag

Creating a page like this is not necessary but it creates a readable & structured layout.
Also they are useful for SEO.

Link attributes

- Contact us → Contact page opens in same tab
- Contact us
↳ Opens in a new tab

We can put any content inside an anchor tag (images, headings etc are all allowed)

If the page is inside a directory, we need to make sure that we link to the correct page.

↳ Same applies to img tag as well

We can add links to images like this

```
<a href="/about"><img src='a.jpg' width="120"></a>
```

↳ Height will be set automatically

The Div tag

div tag is often used as a container for other elements
div is a block level element.

↳ Always takes full width

The Span tag

Span is an inline container.

↳ Takes as much width as necessary
